

Greetings,

I respectfully request that NO allowance be made for the transmission of broadband data over unshielded power lines. I recognize the great commercial pressure to capitalize on the current demand for broadband data services. However there are currently many, still expanding and increasingly cost effective, technologies that are providing broadband data services without the wholesale degradation of the radio spectrum noise floor. Please continue to manage, through regulation, our radio spectrum as an endangered national treasure and not as a nameless commercial asset. Thank you for consideration of my comment.
